

AI-POWERED HEALTHCARE

Meet Sakha. Your Hospital's 24/7 AI Assistant.

Sakha handles every patient call — understanding symptoms, routing to the right specialist, and booking appointments — automatically, in a natural human voice.

Not just a receptionist — an intelligent patient assistant that thinks.

How Sakha Works

One patient call. Six intelligent steps. Zero human involvement required.

1 Patient Calls Your Hospital Number
Same number as always — nothing changes for the patient.

2 Sakha Answers Instantly in Human Voice
Greeted in your hospital's name. Patients cannot tell it is AI.

3 Patient Describes Their Problem
"I have a burning pain in my lower back that shoots down my legs."

4 Sakha Asks Intelligent Follow-Up
"Since how long have you had this? Does it get worse when sitting?"

5 Sakha Recommends the Right Specialist
"These symptoms may suggest spine evaluation. Dr. [Name], Neurologist, is available."

6 Appointment Booked & Saved
Reference number given. Everything saved to your dashboard instantly.

Emergency Detection: If Sakha detects critical symptoms — chest pain, stroke signs, breathing difficulty — it immediately says: "This sounds serious. Please call 112 or go to the Emergency Room now." Patient safety always comes first.

AI Symptom Intelligence

Sakha understands any symptom — common or rare — and routes every patient to the correct specialist automatically.

CARDIAC ALERT

"Chest pain and left arm hurting since morning"

Detects cardiac emergency risk. Asks about BP history. Routes to Cardiologist or advises emergency services immediately.

NEURO CONCERN

"Burning electric sensation running down my spine to my legs"

Identifies possible nerve compression. Asks duration and severity. Routes to Neurologist.

PEDIATRIC

"My 4 year old has high fever and keeps pulling her ear"

Identifies pediatric ear concern. Routes to Pediatrician or ENT specialist appropriately.

THYROID / ENDO

"Very tired all the time and hair is falling a lot"

Identifies possible thyroid concern. Asks about weight changes. Routes to Endocrinologist.

MENTAL HEALTH

"I feel very anxious, heart races, cannot sleep at night"

Identifies mental health and possible cardiac concern. Sensitive routes to Psychiatrist.

EYE EMERGENCY

"Floaters and flashing lights in my right eye since yesterday"

Identifies urgent eye concern. Recommends immediate Ophthalmology evaluation.

Complete Feature Set

Everything your hospital needs, built in from day one.

24/7 Availability

Answers every call at any hour — night, weekend, holiday. Never misses a patient interaction.

Natural Human Voice

Patients cannot distinguish Sakha from real medical staff. Warm, professional, hospital-branded.

Unlimited Symptom Understanding

Handles any symptom — common or rare — using full AI medical reasoning, not a fixed list.

Automatic Doctor Routing

Matches symptoms to the right specialist and recommends the specific available doctor by name.

Appointment Booking

Books slots, gives confirmation reference numbers and saves all data automatically.

Live Hospital Dashboard

Staff sees all calls, transcripts and patient summaries in real time from any device.

Doctor Management

Add doctors, specializations, availability and fees. Sakha uses this data live instantly.

Unlimited Simultaneous Calls

Handles any number of calls at once. No patient ever waits on hold.

Zero Setup for Hospital Staff

We handle full configuration. Your team needs zero technical knowledge — ever.

Sakha vs Existing Solutions

See why hospitals choose Sakha over alternatives.
